Continuation of 11. does NOT place the application in condition for allowance because:

Applicant's arguments filed on 01/30/2009, in particular on pages 7-8, have been fully considered but they are not persuasive. For example:

At the REMARKS page 7, second paragraph, Applicants submit that there is no reason to read "receiving a code address including first and second local memory sub-regions" as saying that the address must have memory. It just means the code address must have sub-regions. However, Examiner's position is that the "code address" or "instruction pointer (IP)" as Applicants alternately cited in the specification is used to indicate the specific location of memory not the area or region of memory (see for example, Fig.3-5, a routine to query block information by given an arbitrary code address, "* addr" and related text). It can be seen that the code address in the specificiaon is included in the local memory sub-regions not the code address including the local memory sub-regions as recited in the claim. Moreover, according to dictionary definition, the code address is a location in memory where the instruction located (see for example, Microsoft Computer Dictionary, fifth Edition, p.276/p.423, "instruction pointer": address (location) of the instruction to be executed.). Applicants assert that claim language "receiving a code address including first and second local memory sub-regions" means the code address must have sub-regions. However, the plain language of the claim (especially the word "including") can be reasonable interpreted as "the code address includes/contains sub-regions" which the specification does not disclose or teach. .
